UNITED STATES DEPARTMENT OF AGRICULTURE, FOREST SERVICE

Vol. 1 Washington, D. C. August 24, 1935. No. 8

The EDITOR is trying out a new idea in this issue. The information shown on pages 3 and 4 has been so arranged that the pages may be cut to fit your copy of the Engineering Field Tables. From time to time, other bits of useful information will be similarly arranged for your convenience.

We have on hand quite a supply of useful "kinks" sent in by the Regions. We are arranging them for publication and they will appear in an early issue.

The following is taken from the July 20th issue of the INTERMOUNTAIN REGION - DAILY NEWS:

> "Skipper says that he doesn't mind having a freshman define a log scale as an insect or forest litter as young trees, but when it comes to calling a logarithm a song of the lumbermen it is going too far."

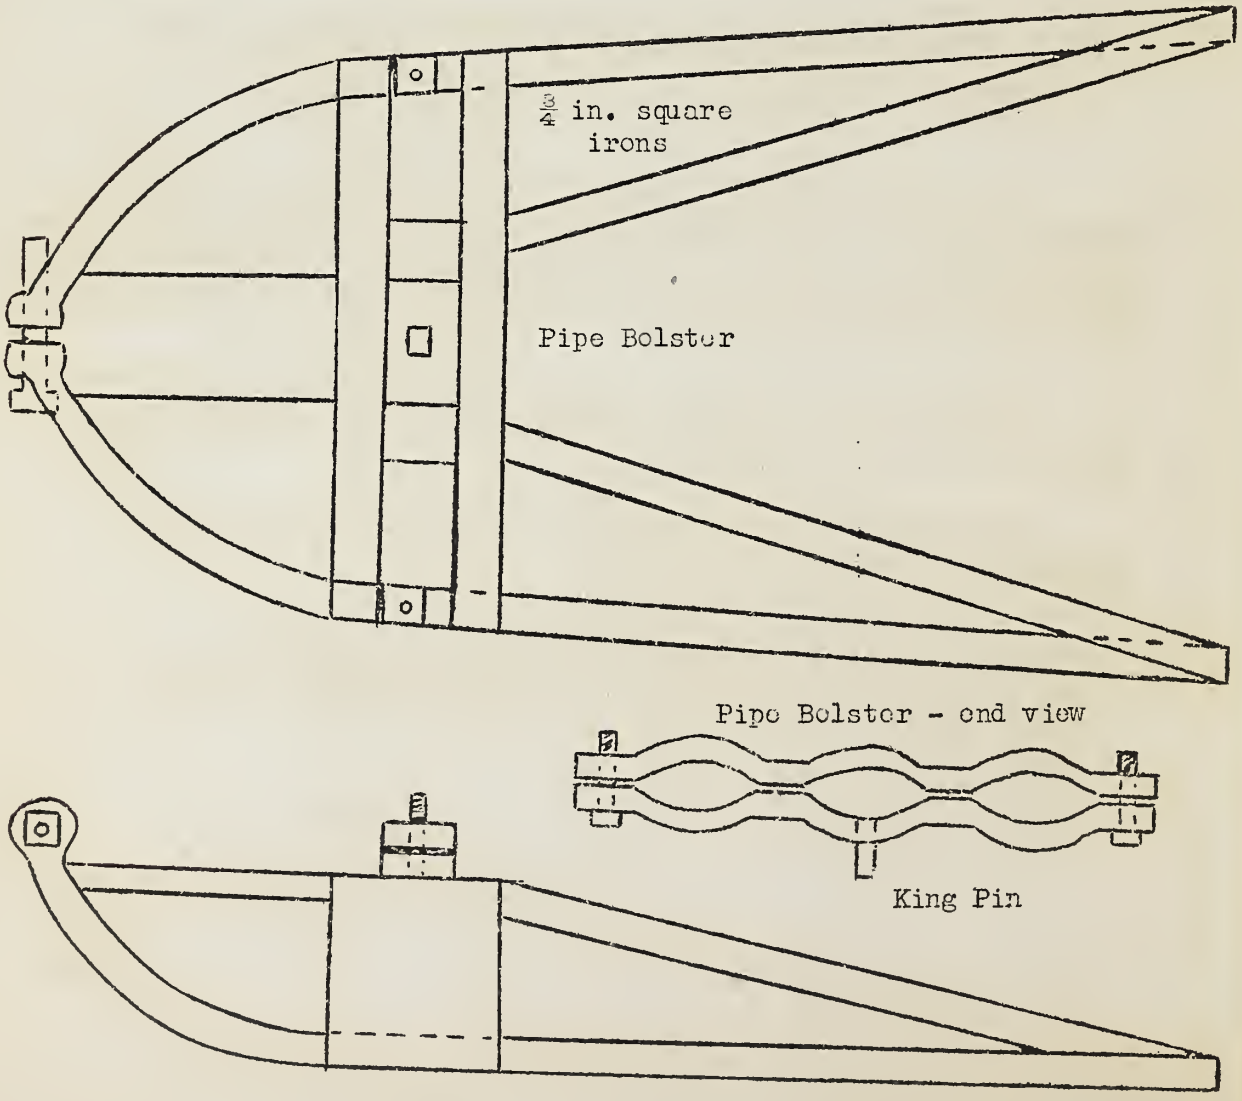
FERGUSON PIPE SLED

Developed in 1933 by A. L. Ferguson, Supt. of Nevada CCC Camp
Region 4

This equipment can be made by any camp blacksmith and is highly recommended where it is necessary to drag pipe into inaccessible areas for reasonable distances.

The sled is made of 3/4" iron and is provided with runners with an elevated bolster which is fastened with a king pin, with a three slot pipe clamp into which any size of pipe up to 4" can be clamped. For larger pipe a heavier clamp would be necessary. The pipe is placed in the slots and bolted down so that the pipe cannot slip. The slot protects the ends from damage. The rear end of the pipe is protected by protection caps screwed on to the threads. One horse will handle three 20 ft. lengths of two-inch pipe over a fairly steep terrain.



Scale 3" = 1'

TABLE FOR DETERMINING CONTENTS OF HORIZONTAL STORAGE TANKS -- ANY SIZE.

Square the diameter in inches and multiply by the length in inches; multiply by .0034; the result is the capacity in gallons.

Divide the number of inches which the gage shows to be in the tank by the diameter in inches to find the percent of the diameter which the gage equals. Multiply the total capacity of the tank by the decimal shown opposite such percent in the following table -- the result will be the contents in gallons.

If the percent of diameter be other than even, determine the proper decimal by proportion. Example: percent equals 3921; take the decimal for 39% and add to it 0.21 of the difference between the decimals for 39% and 40%.

Example: 43 inches in a tank 9ft dia. x 30 ft.

A FORMULA FOR COMPUTING THE ROPE CAPACITY IN FEET OF ANY SIZE DRUM

Dimensions A, B, and C, to be in inches.

RULE: Add the depth of flange (A) to diameter of drum (B). Multiply the sum by the depth of flange (A). Multiply the result by the width of the drum between the flanges (C). Multiply product by figure in column opposite rope size.

EXAMPLE: (A + B) x A x C x Multiplier.

5	2.4	10 3/4	1.116	16 1/2	.7273
5 1/4	2.286	11	1.091	16 3/4	.7164
5 1/2	2.182	11 1/4	1.067	17	.7057
5 3/4	2.087	11 1/2	1.043	17 1/4	.6959
6	2.0	11 3/4	1.021	17 1/2	.686
6 1/4	1.92	12	1.0	17 3/4	.6762
6 1/2	1.846	12 1/4	.9794	18	.6667
6 3/4	1.778	12 1/2	.9597	18 1/4	.6574
7	1.714	12 3/4	.9416	18 1/2	.6486
7 1/4	1.655	13	.9234	18 3/4	.6402
7 1/2	1.602	13 1/4	.9058	19	.6317
7 3/4	1.548	13 1/2	.8889	19 1/4	.6234
8	1.5	13 3/4	.8726	19 1/2	.6154
8 1/4	1.455	14	.857	19 3/4	.6076
8 1/2	1.412	14 1/4	.8424	20	.6000
8 3/4	1.372	14 1/2	.8278	20 1/4	.5928
9	1.333	14 3/4	.8137	20 1/2	.5855
9 1/4	1.297	15	.8000	20 3/4	.5784
9 1/2	1.263	15 1/4	.7868		

EXAMPLE: One piece $5\frac{3}{4}$" x $6\frac{1}{4}$" - 15'6". The constant for $15\frac{1}{2}$' is .774.

Then $\frac{5\frac{3}{4} \times 6\frac{1}{4}}{.774} = 46.42$ feet B.M.

This table is especially useful in connection with the slide rule.
